THE SAVINGS MODEL

What changes when the produce grows on the property

An Urban Ponics food ecosystem grows the herbs, leaves, edible flowers and specialty vegetables a property pays most for and waits longest on — harvested minutes before service, all year. 95% of the water recirculates; about 5 litres per plant instead of 100–150 in soil.

WHAT CHANGES	TODAY (BOUGHT IN)	ON-SITE (URBAN PONICS)
What you buy in	Herbs, leaves, edible flowers and specialty vegetables ordered from importers	A share of that list is grown on the property and leaves the purchase order
What you throw away	Spoilage in transit, rejected deliveries, stock that wilts before service	Cut to order, minutes before service, so produce is not stored to be lost
What you can actually get	The kitchen serves what the importer has in stock that week	The crop plan is set by your kitchen, and the same varieties are available all year
How it is grown	Variable quality, several days old on arrival, grown to someone else's standard	Harvested the same day and grown without pesticides on NACAR

WHAT THIS CLAIMS This is the mechanism, not a quotation — it describes where the money moves, not how much · The size of the saving depends on what you pay for produce today, which is why every project gets its own case.

WHY PROPERTIES DO THIS

No more importing
Herbs, leaves and specialty produce grown steps from the kitchen. No air freight, no customs, no "out of stock" on a Friday.

Sustainable, visibly
95% of the water recirculates. No soil, no run-off, no pesticides. A sustainability story your guests can walk through.

Taste chefs notice
NACAR, our natural plant nutrition, grows produce with the flavour and shelf life of a good garden — without pesticides.

It changes what you buy
Purchase price, freight and spoilage come off the order for the produce you grow yourself. We build the figures on your own invoices.

It grows what you want
The crop plan is built from the chef's menu, not from a standard list. We confirm the assortment before we build.

Assistance, permanently
We train your team, monitor remotely and stay on call. You never operate a farm alone.

Turnkey. We design, build, operate and train the team. One offer. Everything arrives in a box, ready to assemble — no import problems.
